AND OCEANIA**

U. S. DEPARTMENT OF AGRICULTURE
ECONOMIC RESEARCH SERVICE
Washington, D. C.

FOREWORD

This is the fourth annual Agricultural Data Book for the Far East and Oceania. Published in conjunction with The Far East and Oceania Agricultural Situation, it provides current and historical data on production and trade of agricultural products by the countries in those areas.

These data are useful in reviewing the current agricultural situation in the major food deficit area of the world, including the Asian subcontinent, Vietnam, and Japan, the No. 1 market for U.S. agricultural products. They are of value in analyzing trends in production and trade of agricultural products. They are utilized in market development, competition, and projection studies.

Indices of production data are used to measure changes in production of all agricultural products and of food production per capita by country and regions of the Far East and Oceania. They serve as indicators of agricultural growth. Aggregates of production, used in calculating the indices, show the relative importance of agricultural and food production among the several countries. Under a continuing arrangement, the Agency for International Development (AID) provided some financial assistance in the research for and preparation of these indices of production.

The value of U.S. trade in agricultural products, shown by their Standard International Trade Classification (SITC), is included in this publication to provide a more complete review of agricultural relations between the United States and the Far East countries. Use of commodity groups common to all countries permits comparisons not otherwise possible.

Data in this report were prepared in the Situation and Outlook Section, Far East Branch, Foreign Regional Analysis Division under the direction of Riley H. Kirby and Boyd A. Chugg. Others participating in its preparation include Goodloe Barry, Diane B. Ellison, Charles Goode, Mary E. Long, and John B. Parker, Jr.

Clarence E. Pike, Chief
Far East Branch
Foreign Regional Analysis Division

INTRODUCTION

The indices of agricultural production presented on the following pages are constructed from production series, given in thousand metric tons, extending from 1960 through 1969 inclusive. To the extent possible, commodities were combined on a calendar year basis. Calendar year production includes crops harvested during the spring, summer, and autumn of 1965 (for example) and includes some crops, such as rice, the harvest of which started in 1965, but continued into the early part of 1966. Data for livestock products are for calendar year 1965. The 3 calendar years 1957 through 1959 were taken as the base period.

For each country the several commodities were weighted in order to combine into an index. Actual prices expressed in U.S. dollars per metric ton were employed as weights. Separate price weights were used for each country based, to the extent possible, upon a schedule of 1957-59 average prices at the farm level. When farm prices were not available, it was necessary to use wholesale or export prices, adjusting to make them comparable to farm level. In some instances no price information was available. It was then necessary to make office estimates, depending, in part, upon relationships between commodities in neighboring countries.

Commodity prices in foreign countries are nearly always reported in local currencies. Converting these to U.S. dollars posed a problem because the currencies of most countries included in this study were overvalued in varying degrees in the years 1957-59. Therefore, to convert with exchange rates at par value would give an unrealistic schedule of prices in U.S. dollars. Prices would be too high in proportion to the extent of currency depreciation. This would not affect the computation of an index for a given country, but it would cause difficulty when combining production of several countries to obtain a regional index. For this reason conversion of prices to U.S. dollars was made by using free market exchange rates rather than official rates. Free market rates reported at Hong Kong represent the principal source of information for this exercise. Because of the nature of the data, it was not possible to obtain an average for the three years 1957-59. In general, the rates employed were those reported at the end of September 1958, i.e., near the mid-point of our base period.

To calculate the indices for each country, the production of each commodity was multiplied by the price weight and the resulting aggregates were summed. (Note that since the weights are actual prices, the aggregates that appear in the following tables are values of production in million U.S. dollars.) The total aggregate for a given year was then divided by the total aggregate for the base period (1957-59) to obtain the index number. The per capita indices for each country were calculated by dividing the indices of total agricultural production by the population indices. Food production indices were calculated similarly, excluding non-food items.

Most of the production figures for the major crops used in preparing these indices are drawn from official publications of countries of the region. These sources are supplemented by the periodic commodity reports published by the Foreign Agricultural Service (FAS) of the U.S. Department of Agriculture. Slight differences in magnitude may occur as a result of conversion to different units and rounding. Other discrepancies may arise from the use of a different time period.

For some commodities, not all countries of the Far East are shown in FAS reports. For other commodities, generally unimportant in world commerce, FAS does not publish production estimates.

To make the present indices as representative as possible of the agricultural production pattern in each country, the Far East Branch has included estimates of production of many commodities for which official FAS figures are not available. These estimates are based upon data, often incomplete, received from diverse sources including official statistics of foreign governments, other foreign source material, and reports of U.S. Agricultural Attaches. In some instances data for the most recent year or years are not available from FAS publications or from any other official or unofficial sources. These gaps have been filled with estimates made by country specialists of the Far East Branch based upon past trends and knowledge of the country situation. Judgment is a dominant factor, and some of these figures are subject to a wide range of error. All production figures are based on the latest information available to this office as of March 1, 1970.

Data on agricultural trade shown in tables 23 through 50 are taken from the official customs returns of the respective countries. They include selected Standard International Trade Classification (SITC) groups of products that are agricultural or agricultural related. Trade of the United States shown in tables 51 through 68 with the same SITC groups are taken from foreign trade reports of the Bureau of the Census U.S. Department of Commerce.

COMMODITIES CLASSIFIED AS FOOD

<u>Cereals</u>	<u>Vegetables and Tubers</u>	<u>Fruits</u>
Rice, paddy	White potatoes	Bananas
Wheat	Sweetpotatoes	Pineapples
Millet and sorghum	Cassava	Oranges
Barley	Onions	Other citrus
Corn	Chillies	Grapes
Other grains	Other vegetables	Other fruit
<u>Oilseeds and Oils</u>	<u>Livestock Products</u>	<u>Pulses</u>
Copra	Milk	Pulses
Peanuts	Eggs	Chickpeas
Cottonseed	Meat	Pigeonpeas
Rape and mustard seed		Other pulses
Soybeans		
Sesame	Sugar	<u>Other</u>
Palm oil		
Palm kernel	Sugarcane	Cacao
	Sugar beets	
	Honey
